Employment

Nov 2021 - Current

tombola – Game Developer

- Released several arcade & bingo games and three bingo games on all territories tombola operates in (UK, Denmark, Italy, Spain, Sweden) for mobile and desktop.
- Recently worked on launching a Jackpots network in the Spanish and Italian markets with 3 connected games, and worked on bingo games for a B2B offering to Sisal in Italy.
- Primarily worked on the Jackpots games as a solo developer, taking ownership on the project. The B2B project was a team effort where I worked with two other developers.
- A majority of my recent projects at tombola I've seen through from start to finish as the only developer on the project.
- Most of my programming is done with Typescript, using Git for version control and JIRA for ticket management.
- Worked closely alongside the QA team to fix bugs found on the previously mentioned projects

July 2017 – September 2017

Northumbrian Water - Administration

- Worked with CMOS and CC&B to correct property records during system migration.
- Used Excel spreadsheets and system records to manage data for Northumbria, Newcastle and Hartlepool areas.

Programming Languages

- Java - 2 Years
- C++ - 2 Years
- C# - 2 Years
- Typescript - 4 Years
- PIXI - 4 Years
- HTML/CSS - 5 Years

Skills

- Problem solving
- Teamwork
- Git version control
- JIRA workflows
- Website development
- Communication
- Programming
- Project ownership
- Unity
- Adaptability

Education

2017-2021

MComp Computer Science with Game Engineering at Newcastle University

- Achieved a First-Class Honours, graduating in July 2021.
- In my 4th year of university I've had experience working with OpenGL rendering for graphics and Newtonian physics calculations. My Game Technologies coursework had me using advanced knowledge of physics to create the engine for a 3D platformer inspired by 'Fall Guys'. This included implementing the A* algorithm for pathfinding, doing collision detection/resolution for capsules, spheres, AABBs and OBBs and implementing advanced AI with state machines and behaviour trees. Game systems like these are where my main strengths lie.
- Additionally, I worked as a team of 8 students to make an expansion to this coursework. I was responsible for creating levels using a Unity editor made by a teammate and creating numerous features such as a basic AI controlled enemy character and a powerup system for our player character.

2013-2017

A-Levels and GCSES at Framwellgate School Durham (Sixth Form Center)

A-Levels

- Maths – **A***
- Further Maths – **C**
- Physics - **C**

GCSEs

- 11 GCSE Qualifications (A* - B Grades)

Outside Of Work

- I'm a dedicated player in the official Pokémon Video Game Championship series! In the 2025 season I qualified for the World Championships by finishing the season as one of the top 75 players in Europe. This involved playing in regional and international tournaments all across the world in places like Stockholm, Gdansk and New Orleans. Preparation for these tournaments involves a lot of problem solving & planning to figure out particularly difficult matchups, and I would track my practice games/matchup spreads in large spreadsheets to stay organised.
- I participated in the 10:10 Games Women In Games Jam and made a 2.5D platformer game in Unreal Engine 5. The game was about racing through levels to impress a rival character, eventually leading to a queer romance. I was the project's leader, so I managed our team's version control on Git and delegated tasks for the team.
- I was a committee member for Newcastle University's Gaming Society throughout 2018-2020, managing Overwatch esports teams for competition in university leagues like NUEL (National University Esports League) and NSE (National Student Esports). This role also included helping run society events, such as weekly society meets and a charity event for Gameblast 2019.
